

Outstanding Universal Value

Brief synthesis

The remarkable juxtaposition of two clearly articulated urban planning phenomena. The contrast between the organic medieval Old Town and the planned Georgian New Town of Edinburgh, Scotland, provides a clarity of urban structure unrivalled in Europe. The juxtaposition of these two distinctive townscapes, each of exceptional historic and architectural interest, which are linked across the landscape divide, the "great arena" of Sir Walter Scott's Waverley Valley, by the urban viaduct, North Bridge, and by the Mound, creates the outstanding urban landscape.

The Old Town stretches along a high ridge from the Castle on its dramatically situated rock down to the Palace of Holyrood. Its form reflects the burgage plots of the Canongate, founded as an "abbatial burgh" dependent on the Abbey of Holyrood, and the national tradition of building tall on the narrow "tofts" or plots separated by lanes or "closes" which created some of the world's tallest buildings of their age, the dramatic, robust, and distinctive tenement buildings. It contains many 16th and 17th century merchants' and nobles' houses such as the early 17th century restored mansion house of Gladstone's Land which rises to six storeys, and important early public buildings such as the Canongate Tolbooth and St Giles Cathedral.

The Old Town is characterized by the survival of the little-altered medieval "fishbone" street pattern of narrow closes, wynds, and courts leading off the spine formed by the High Street, the broadest, longest street in the Old Town, with a sense of enclosed space derived from its width, the height of the buildings lining it, and the small scale of any breaks between them.

The New Town, constructed between 1767 and 1890 as a collection of seven new towns on the glacial plain to the north of the Old Town, is framed and articulated by an uncommonly high concentration of planned ensembles of ashlar-faced, world-class, neo-classical buildings, associated with renowned architects, including John and Robert Adam (1728-92), Sir William Chambers (1723-96), and William Playfair (1790-1857). Contained and integrated with the townscape are gardens, designed to take full advantage of the

topography, while forming an extensive system of private and public open spaces. The New Town is integrated with large green spaces. It covers a very large area of 3,288 ha, is consistent to an unrivalled degree, and survives virtually intact.

Some of the finest public and commercial monuments of the New-classical revival in Europe survive in the city, reflecting its continuing status as the capital of Scotland since 1437, and a major centre of thought and learning in the 18th century Age of Enlightenment, with its close cultural and political links with mainland Europe.

The successive planned extensions from the first New Town, and the high quality of the architecture, set standards for Scotland and beyond, and exerted a major influence on the development of urban architecture and town planning throughout Europe.

The dramatic topography of the Old Town combined with the planned alignments of key buildings in both the Old and the New Town, results in spectacular views and panoramas and an iconic skyline.

The renewal and revival of the Old Town in the late 19th century, and the adaptation of the distinctive Baronial style of building for use in an urban environment, influenced the development of conservation policies for urban environments.

Criterion (ii): The successive planned extensions of the New Town, and the high quality of its architecture, set standards for Scotland and beyond, and exerted a major influence on the development of urban architecture and town planning throughout Europe, in the 18th and 19th centuries.

Criterion (iv): The Old and New Towns together form a dramatic reflection of significant changes in European urban planning, from the inward looking, defensive walled medieval city of royal palaces, abbeys and organically developed burgh plots in the Old Town, through the expansive formal Enlightenment planning of the 18th and 19th centuries in the New Town, to the 19th century rediscovery and revival of the Old Town with its adaptation of a distinctive Baronial style of architecture in an urban setting.

The property encompasses significant town-planning components, including layout, buildings, open spaces and views, that demonstrate the distinctiveness between the organic growth of the Old Town and the planned terraces and squares of the New Town with the wide landscaped valley between. Overall the property forms a remarkably consistent and coherent entity which has developed and adapted over time. It has largely preserved its skyline and extensive views in and out of the property, although as with any modern, living city these have altered and developed over time, while preserving the key attributes of Outstanding Universal Value within the property. The vulnerability of the skyline and the views in and out of the property has been addressed by the introduction of a Skyline Policy.

Notes:

World Heritage and the Planning System

In the United Kingdom, World Heritage status is protected by existing systems of protection; listed buildings and conservation areas but also SAMs etc. Other countries have specific laws, policies and procedures. This can be efficient, but in the case of complex urban areas, it can also lead to a narrow approach, rather than integrating the management of the outstanding universal value of the World Heritage Site with other aspects of city management.

In Edinburgh, World Heritage status is supported by local plan, policy and specialist input from Edinburgh World Heritage in relation to OUV. The World Heritage Site Management Plan seeks to encourage integrated thinking and action in relation to wider aspects of managing the OUV.

Edinburgh World Heritage's specialist input is governed by a protocol agreed with the City of Edinburgh Council (CEC) and Historic Environment Scotland (HES), based on the principles of early engagement and co-operation with HES and CEC.
